Attachments: Copy of Draft_Part particulate Data from Logbooks.xlsx; ATT00001.htm

Jim,

I just want to catch you up to speed on the situation. Lora sent this data from the air monitoring contractor on-site. Lora called me to discuss. It seems that the data collected is for PM10 and trying to differentiate PM10 from PM2.5 is improbable without additional air sampling. We are waiting for access to additional data to get a better picture of what is happening. The highest readings are onsite which are expected given that is the source of the fire. There some elevated readings at Barker and the school, but the school is closed and average readings at Barker are less than 150 ug/m3.

Charles

Charles, will call you in a few to discuss.

EPA OSC on site now and would like to discuss these data with us this morning.
Lora
